- Users can reset their forgotten password from Forgot Password option.

User Profile
- Users can manage their profile by adding details like name, profile picture and quote/status.
- The restaurants which user have added as favourite will be displayed in user's profile with the picture of respective restaurant (horizontal scroll for more restaurants).
- Pictures of restaurants will be in alphabetical order.

Home
- A few images will be displayed in the middle (automatic slideshow of the images).
- There are 3 options:
  - Explore
  - Zirafers
  - Near Me
- When users click into any of the option, they will be redirected to the respective screen.

Explore
- User will see various main categories for restaurants like student eats, trending etc.
- When user clicks on a category, they will be redirected to Restaurant Picks screen (only restaurants with that category tag in backend will be shown).
- User can click on the button beside the search option to go to More Categories screen.
- User can also search a category of their choice.

More Categories
- User will see 6 header categories which comprise of sub-categories each.
- User can click into a header category and a list of sub-categories will appear on the next screen (sub-categories screen has not been designed).

Small Categories
- User will see a list of sub-categories.
- When user clicks into a sub-category, they will be redirected to Restaurant Picks screen (only restaurants with that sub-category tag will be shown).

Note: The main categories, header categories and sub-categories are predefined.

Restaurant Picks
- The list of restaurants will be displayed with picture, name, average rating and popularity (vertical scroll for more restaurants).
- When user clicks on any restaurant, they will be redirected to Restaurant Details screen.

- User can click on the top right button to arrange the restaurants in the order they want like alphabetical, price and rating.

Restaurant Details
- There will be a picture, name and location of restaurant (horizontal swipe for more pictures of restaurant).
- User can tap on top right button to favourite the restaurant.
- There are 3 tabs in this screen:
    - Info
        - Details like price, top picks (photos of top dishes), rating, distance from user's current location, direction/Uber, contact number and opening hours for the day will be displayed.
        - When user clicks into the button beside opening hours of the day, opening hours for the entire week will be displayed.
        - When user clicks into direction, they will be redirected to Apple Map for directions to the restaurants.
        - When user clicks into Uber widget, they will be redirected to Ride with Uber within the app.
        - When user clicks into contact number, they will be redirected to Apple Phone for calling the restaurant.
    - Reviews
        - Rating and reviews given to restaurant by various Zirafers will be displayed (there are a few parameters for ratings but only average rating will be shown out of 10 points).
        - When user clicks into Zirafer's profile photo/name, they will be redirected to Zirafer Profile screen.
    - Menu
        - Restaurant's menu will be displayed in PDF format within the area provided (horizontal and vertical scroll if image is larger).

Note: All details will be added manually from backend.
